Hosted Voice and Collaboration Suite

The “business phone system” is not what it used to be. The breakthrough of Voice-over-IP (VoIP) transformed the traditional voice application into a collaboration suite over the converged IP network. With **BConnected Voice**, the intelligence of the service is secure in our resilient data center. You can process calls from any place over any device; your desk phone, at home, or on the road from your Smartphone.

BConnected Voice

BConnected Voice services offers **all** of the features of an installed, on-premise Cisco Unified Communications Manager system, without a major capital equipment investment. All functions and processes – including call control, dial plans, and special applications – take place in our world-class, secure data center.

With **BConnected Voice**, your organization can project a professional image, for as little as the purchase of a variety of Cisco phones. Enjoy all of the benefits of a full-featured system, for a predictable monthly cost-per-user subscription, including:

- **Unified Messaging – receive voicemail messages in your email inbox**
- **Presence and instant messaging**
- **Ad-hoc conferencing – “Meet Me” rooms**
- **Click-to-Dial from MS Outlook**
- **Unified Call Center / help desk capabilities**
- **Employee directories**
- **Give office extensions a mobile “twin” with extension mobility**

Featured Solutions

Presence and Instant Messaging:

Give your teams the freedom to be productive from anywhere, on any device. Access presence, instant messaging (IM), voice, conferencing, voice messaging, and information sharing. Now you can find the right people, see if and how they are available, and collaborate using your preferred method.

Unified Messaging with Cisco Unity Connection:

Access and manage messages from an email inbox, Cisco Jabber, Cisco Desk Phone, smartphone, or tablet. Unity Connection also provides flexible message access and delivery format options, including support for voice commands, video greetings, and speech-to-text transcription.

Stay in Touch with Mobility:

How can you extend the reach of your remote workers to their customers and co-workers? With Extension Mobility, employees no longer need to give out their personal mobile phone numbers. Set up Extension Mobility to ring calls to their extensions simultaneously on any number of devices. No more missed calls. No more missed opportunities. Because **BConnected Voice** is an extension of your core network, Mobility enables workers to access business critical information and applications seamlessly, from any device. Ask BBH Solutions how our **BConnected Video** for desktop and mobile integrates with **BConnected Voice** for multi-party video conferencing.
