

# 4 WARNING SIGNS YOUR NETWORK IS READY FOR A CHANGE

...AND HOW TO FIX THEM WITH BBH SOLUTIONS.

Legacy infrastructure doesn't just slow you down; it puts your business at risk. If you're seeing any of these signs, it may be time to modernize your network and security posture.

## #1 YOUR FIREWALL IS OUTDATED—AND ON HACKERS' RADAR

**What it means:**  
Legacy firewalls like Cisco ASA and Meraki MX84 are no longer supported, and the FBI has issued warnings about vulnerabilities in end-of-life devices. These systems are now top targets for botnets and ransomware.

**How to fix it:**  
Upgrade to Cisco Secure Firewall or Meraki MX — modern solutions with built-in threat prevention and active support.

## #2 YOU CAN'T SEE WHAT'S HAPPENING ACROSS YOUR NETWORK

**What it means:**  
If you don't have centralized visibility into network activity, threats can go undetected. Blind spots lead to breaches.

**How to fix it:**  
Deploy Meraki MX for cloud-managed simplicity or Cisco Secure Firewall for deep, layered visibility across apps, users, and devices.

## #3 YOU'RE MANAGING TOO MANY TOOLS WITH TOO FEW PEOPLE

**What it means:**  
Juggling disconnected tools across multiple dashboards wastes time and exposes your organization to configuration errors and missed alerts.

**How to fix it:**  
Consolidate with BBH's managed services—a Cisco Certified MSSP with a SOC 2 Type II attestation, offering one point of control for your entire security stack.

## #4 YOU HAVEN'T ASSESSED YOUR RISK IN OVER A YEAR

**What it means:**  
Without regular risk assessments, you can't address vulnerabilities or plan for future security needs.

**How to fix it:**  
Use BBH's Interactive Risk Assessment tool to benchmark your security posture and identify gaps you may not see.

**DON'T WAIT UNTIL IT'S TOO LATE. SEE WHERE YOUR NETWORK STANDS.**
